

Listening Session at TRB on HSIP Minimum Roadway Inventory Elements and Crash Data

Following the release of GAO Report 09-35, which looked at the Highway Safety Improvement Program (HSIP), the Federal Highway Administration Office of Safety is soliciting feedback on issues related to minimum roadway inventory elements and crash data. To access the GAO Report, please visit <http://www.gao.gov/new.items/d0935.pdf>.

FHWA will host an upcoming listening session, facilitated by the UNC Highway Safety Research Center, to obtain input on possible approaches to address the GAO recommendations.

**Monday, January 11, 2010
5:30 PM – 6:30 PM
2010 Transportation Research Board Annual Meeting
Marriott Wardman Park
Ethan Allen Room
Washington, DC**

FHWA hopes to hear additional ideas and comments regarding mandatory roadway inventory elements, on scheduling inventory data improvements and on other approaches proposed by local and state-level stakeholders. In addition to hosting the listening session, FHWA also conducted two feedback Webinars on the topic in December 2009.

Please visit www.hsisinfo.org/feedback to:

- Access copies of the presentations used during the Webinars, and
- Provide additional comments via Web form.
